# DECRETI, DELIBERE E ORDINANZE MINISTERIALI

## MINISTERO DELLA SANITA'

DECRETO 28 aprile 1997.

**Attuazione dell'art. 37, commi 1 e 2, del decreto legislativo 3 febbraio 1997, n. 52, concernente classificazione, imballaggio ed etichettatura delle sostanze pericolose.**

### IL MINISTRO DELLA SANITA'

Visto il decreto legislativo 3 febbraio 1997, n. 52, relativo all'attuazione della direttiva 92/32/CEE concernente classificazione, imballaggio ed etichettatura delle sostanze pericolose, ed in particolare l'art. 37, commi 1 e 2;

Vista la direttiva della Commissione 91/632/CEE del 28 ottobre 1991 recante quindicesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 92/37/CEE del 30 aprile 1992 recante sedicesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 92/69/CEE del 31 luglio 1992 recante diciassettesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 93/21/CEE del 27 aprile 1993 recante diciottesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 93/72/CEE del 1° settembre 1993 recante diciannovesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 93/101/CE dell'11 novembre 1993 recante ventesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 94/69/CE del 19 dicembre 1994 recante ventunesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposi-

zioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Vista la direttiva della Commissione 96/54/CE del 30 luglio 1996 recante ventiduesimo adeguamento al progresso tecnico della direttiva 67/548/CEE del Consiglio concernente il ravvicinamento delle disposizioni legislative, regolamentari ed amministrative relative alla classificazione, all'imballaggio e all'etichettatura delle sostanze pericolose;

Decreta:

#### Art. 1.

1. L'allegato I al decreto del Ministro della sanità 16 febbraio 1993, pubblicato nel supplemento ordinario alla *Gazzetta Ufficiale* della Repubblica italiana n. 116 del 20 maggio 1993, è sostituito dall'allegato I al presente decreto.

2. Allo scopo di facilitare la ricerca è aggiunta, inoltre, un'appendice che riporta in lingua italiana ed in ordine alfabetico il solo elenco nominativo delle medesime sostanze pericolose classificate, corredata dal relativo Numero indice di identificazione. Detta appendice costituisce parte integrante dell'allegato medesimo.

#### Art. 2.

1. Gli allegati III e IV al decreto del Ministro della sanità 16 febbraio 1993, pubblicato nel supplemento ordinario alla *Gazzetta Ufficiale* della Repubblica italiana n. 116 del 20 maggio 1993, sono sostituiti dagli allegati III e IV al presente decreto.

#### Art. 3.

1. Gli allegati II, VII, VIII e IX al decreto legislativo 3 febbraio 1997, n. 52, pubblicato nel supplemento ordinario alla *Gazzetta Ufficiale* della Repubblica italiana n. 58 dell'11 marzo 1997, sono sostituiti dagli allegati II, VII, VIII e IX al presente decreto.

#### Art. 4.

1. L'allegato V al decreto del Ministro della sanità 3 dicembre 1985, pubblicato nel supplemento ordinario alla *Gazzetta Ufficiale* della Repubblica italiana n. 305 del 30 dicembre 1985, come integrato, da ultimo dall'allegato II al decreto del Ministro della sanità 20 dicembre 1989, pubblicato nel supplemento ordinario alla *Gazzetta Ufficiale* della Repubblica italiana n. 38 del 15 febbraio 1990, è sostituito dall'allegato V al presente decreto.

Il presente decreto sarà pubblicato nella *Gazzetta Ufficiale* della Repubblica italiana.

Roma, 28 aprile 1997

Il Ministro: BINDI

Registrato alla Corte dei conti il 18 giugno 1997

## **ALLEGATO I**

## PREFAZIONE ALL'ALLEGATO I

**Introduzione**

L'allegato I è un elenco delle sostanze pericolose per le quali, a livello comunitario, sono state concordate una classificazione e un'etichettatura armonizzate ai sensi della procedura stabilita nell'articolo 4, paragrafo 3 della presente direttiva.

**Elenco delle sostanze**

Nell'allegato I le sostanze sono elencate in funzione del numero atomico dell'elemento più caratteristico delle loro proprietà. La tabella A contiene un elenco degli elementi chimici disposti secondo il loro numero atomico. Data la loro varietà, le sostanze organiche sono state inserite nelle categorie convenzionali indicate nella tabella B.

Il numero di ogni sostanza è rappresentato da una sequenza numerica del tipo ABC-RST-VW-Y, dove:

- ABC rappresenta il numero atomico dell'elemento chimico più caratteristico (preceduto da uno o due zeri per completare la sequenza), o il numero della categoria convenzionale relativa alle sostanze organiche;
- RST rappresenta il numero progressivo delle sostanze considerate nella sequenza ABC;
- VW indica la forma di cui la sostanza viene prodotta o immessa in commercio;
- Y rappresenta la cifra di controllo (check-digit) calcolata secondo il metodo utilizzato dall'ISBN (International Standard Book Number).

Ad esempio, il numero del clorato di sodio è: 017-005-00-9.

Per le sostanze pericolose incluse nell'inventario europeo delle sostanze chimiche esistenti a carattere commerciale (Einecs, GU n. C 146 A del 15. 6. 1990), viene indicato anche il numero Einecs, rappresentato da una sequenza di sette cifre XXX-XXX-X che inizia da 200-001-8.

Per le sostanze pericolose notificate ai sensi della presente direttiva, viene indicato il numero della sostanza dell'elenco europeo delle sostanze chimiche notificate (Elincs). Detto numero è rappresentato da una sequenza di sette cifre del tipo XXX-XXX-X che inizia da 400-010-9.

Viene anche indicato il numero CAS (Chemical Abstracts Service) per facilitare l'identificazione della sostanza. Va sottolineato che il numero Einecs comprende sia le forme anidre che idrate di una sostanza, mentre spesso vi sono numerazioni CAS diverse per dette forme. In ogni caso il numero CAS incluso si riferisce soltanto alla forma anidra e pertanto non descrive sempre le sostanze in modo altrettanto preciso del numero Einecs.

I numeri Einecs, Elincs o CAS non sono di solito indicati per i preparati composti da più di tre sostanze diverse.

Per facilitare l'identificazione della sostanza viene indicata anche la struttura delle sostanze ben definite.

**Nomenclatura**

Le sostanze pericolose sono contrassegnate ovunque possibile dalle denominazioni Einecs o Elincs. Le altre sostanze non incluse negli elenchi Einecs ed Elincs sono designate con una denominazione chimica riconosciuta a livello internazionale (ad esempio, ISO, IUPAC); in alcuni casi viene specificato anche il nome comune.

Le impurezze, gli additivi e altri componenti meno significativi non vengono solitamente indicati, **sempreché** non contribuiscano in modo rilevante alla classificazione della sostanza.

Alcune sostanze sono descritte come « miscela di A e B » e si riferiscono ad una miscela specifica. In alcuni casi, quando risulta necessario definire la sostanza immessa in commercio, vengono indicate le proporzioni delle sostanze principali presenti nella miscela.

La denominazione di alcune sostanze comprende l'indicazione della purezza espressa in percentuale. Le sostanze che presentano un tenore più elevato di sostanza attiva (ad esempio, un perossido organico) non vengono incluse nell'allegato I e possono presentare altre proprietà pericolose (ad esempio, esplosive). Quando vengono indicati i limiti di concentrazione specifici, essi si riferiscono alla sostanza o alle sostanze figuranti nell'elenco. In particolare, nel caso di miscele di sostanze descritte con l'indicazione della purezza specifica in percentuale, i limiti si applicano alla sostanza nella forma in cui questa viene descritta nell'allegato I, e non alla sostanza pura.

L'articolo 23, paragrafo 2, lettera a) prevede che, per le sostanze elencate nell'allegato II, la voce della sostanza che deve figurare sull'etichetta sia uno di quelli indicati nell'allegato II. Per le sostanze complesse derivate dal carbone (ad esempio, i cianuri complessi), come per le altre, le informazioni supplementari in parentesi correlate a tale informazione devono figurare sull'etichetta.

Alcune voci contengono un riferimento alle impurezze. Cfr. Indice n. 603-190-00-X (acrilammide) e 603-190-00-X (acrilammide) di metile (contenente "X" di cianammide). In questi casi, il riferimento in parentesi fa parte del nome e deve figurare sull'etichetta.

Alcune voci si riferiscono a gruppi di sostanze (cfr. Indice n. 406-007-00-5, cianuri). Ad eccezione dei cianuri complessi, come ferrocianuri, ferricianuri e ossianuri di mercurio, per sostanze individuali contemplate da queste voci, si deve indicare la designazione EINECS o un'altra designazione riconosciuta a livello internazionale.

## Presentazione

Per ogni sostanza figurante nell'allegato I vengono fornite le seguenti informazioni:

### a) Classificazione

- i) La classificazione consiste nell'inserire una sostanza in una delle categorie di pericolo indicate nell'articolo 2, paragrafo 2 della presente direttiva attribuendole la(e) relativa(e) frase(i) di rischio. La classificazione presenta conseguenze non solo per l'etichettatura, ma anche per altre disposizioni legislative e regolamentari relative alle sostanze pericolose.
- ii) La classificazione in ogni categoria di pericolo viene indicata in riquadri separati; in genere, ogni riquadro comprende una descrizione della categoria di pericolo e la(e) relativa(e) frase(i) di rischio (frasi R). In alcuni casi, tuttavia (ad esempio, per le sostanze classificate come infiammabili, sensibilizzanti e per alcune sostanze classificate come pericolose per l'ambiente), compaiono solo le frasi di rischio in quanto esse forniscono informazioni sufficienti.
- iii) In appresso vengono descritte le categorie di pericolo:
  - Esplosivo: E
  - Comburente: O
  - Altamente infiammabile: F+
  - Facilmente infiammabile: F
  - Infiammabile: R 10
  - Altamente tossico: T+
  - Tossico: T
  - Nocivo: Xn
  - Corrosivo: C
  - Irritante: Xi
  - Sensibilizzante: R 42 e/o R 43
  - Cancerogeno: Carc. Cat. (\*)
  - Mutageno: Mut. Cat. (\*)
  - Tossico per il ciclo riproduttivo: Repr. Cat. (\*)
  - Pericoloso per l'ambiente: N o/e R 52, R 53, R 59.
- iv) Altre frasi di rischio che descrivono proprietà diverse (cfr. punti 2.2.6 e 3.2.8 della guida all'etichettatura) sono indicate in riquadri separati.

### b) Etichetta

comprendente:

- i) il o i simboli, ove previsti, e le indicazioni di pericolo attribuite alla sostanza in base all'allegato II (cfr. articolo 23, paragrafo 2, lettera c));

(\*) Se del caso, viene indicata la categoria della sostanza cancerogena, mutagena o tossica per il ciclo riproduttivo (ad esempio 1, 2 o 3).

• frasi di rischio (frasi R), rappresentate da una serie di cifre precedute dalla lettera R che indica la natura dei rischi particolari di cui all'allegato III [cfr. articolo 23, paragrafo 2, lettera d)]. Le cifre sono separate da un trattino orizzontale (-) per indicare enunciazioni separate dei rischi particolari (R), o da una barra inclinata (/) per indicare l'enunciazione combinata in una sola frase, dei rischi particolari di cui all'allegato III;

• i consigli di prudenza (frasi S), rappresentati da una serie di cifre precedute dalla lettera S che indicano le precauzioni di sicurezza raccomandate ai sensi dell'allegato IV [cfr. articolo 23, paragrafo 2, lettera e)]. Anche in questo caso le cifre sono separate da un trattino orizzontale o da una barra inclinata aventi lo stesso significato indicato al precedente punto b), con l'eccezione che le enunciazioni combinate dei consigli di prudenza raccomandati figurano nell'allegato IV. I consigli di prudenza si riferiscono solo alle sostanze; per i preparati i consigli sono scelti in base alle regole abituali.

Le sostanze che, per talune sostanze e preparati pericolosi venduti al pubblico, sono obbligatorie alcune frasi S.

Le frasi S 1, S 2 ed S 45 sono obbligatorie per tutte le sostanze e i preparati altamente tossici, tossici e corrosivi venduti al pubblico.

Le frasi S 3, S 4, S 5, S 6, S 7, S 8, S 9, S 10, S 11, S 12, S 13, S 14, S 15, S 16, S 17, S 18, S 19, S 20, S 21, S 22, S 23, S 24, S 25, S 26, S 27, S 28, S 29, S 30, S 31, S 32, S 33, S 34, S 35, S 36, S 37, S 38, S 39, S 40, S 41, S 42, S 43, S 44, S 46, S 47, S 48, S 49, S 50, S 51, S 52, S 53, S 54, S 55, S 56, S 57, S 58, S 59, S 60, S 61, S 62, S 63, S 64, S 65, S 66, S 67, S 68, S 69, S 70, S 71, S 72, S 73, S 74, S 75, S 76, S 77, S 78, S 79, S 80, S 81, S 82, S 83, S 84, S 85, S 86, S 87, S 88, S 89, S 90, S 91, S 92, S 93, S 94, S 95, S 96, S 97, S 98, S 99, S 100 sono obbligatorie per tutte le altre sostanze e preparati pericolosi venduti al pubblico ad eccezione di quelli classificati soltanto come «pericolosi per l'ambiente».

Le frasi S 1 ed S 2 sono indicate tra parentesi nell'allegato I e si possono omettere nell'etichetta solo qualora la sostanza o il preparato siano venduti per usi esclusivamente industriali.

**Limiti di concentrazione e relative classificazioni tossicologiche necessari per classificare i preparati pericolosi contenenti la sostanza in conformità della direttiva 88/379/CEE.**

Se non viene specificato diversamente, i limiti di concentrazione sono in percentuale del peso rispetto al peso totale del preparato.

Se non vengono indicati limiti di concentrazione, i limiti da utilizzare nell'applicazione del metodo convenzionale di valutazione dei rischi per la salute sono quelli indicati nell'allegato I della direttiva sui preparati (88/379/CEE).

#### Requisiti generali

##### Gruppi di sostanze

Se si applicano i requisiti ai gruppi di sostanze, in tal caso, i requisiti di classificazione e di etichettatura si applicano a tutte le sostanze del gruppo se queste sono immesse in commercio, e figurano nei requisiti di etichettatura. Qualora una sostanza inclusa in un gruppo si trovi in un'altra sostanza sotto forma di impurezza, nell'etichettatura delle sostanze vengono presi in considerazione i requisiti di classificazione e di etichettatura relativi al gruppo di sostanze.

In alcuni casi, vi sono requisiti di classificazione e di etichettatura per sostanze particolari che potrebbero rientrare nei gruppi di sostanze. In detti casi, per la sostanza vi sarà una voce specifica nell'allegato I e il gruppo di sostanze reccherà l'annotazione «ad eccezione delle sostanze designate nel presente allegato».

Per le classificazioni contraria, le voci riguardanti i sali (indicati con qualsiasi denominazione) nell'allegato I si riferiscono alla forma anidra e a quella idrata.

##### Requisiti con il numero Elincs

Le sostanze dell'allegato I che presentano un numero Elincs sono state notificate ai sensi della presente direttiva. Il produttore o l'importatore che non abbia in precedenza notificato dette sostanze e che intenda immetterle in commercio deve far riferimento alle disposizioni della presente direttiva.

## Note esplicative relative all'identificazione e all'etichettatura delle sostanze

In appresso viene indicato il significato delle note utilizzate sotto la numerazione:

*Nota A*

Il nome della sostanza deve figurare sull'etichetta sotto una delle denominazioni di cui all'allegato I della presente direttiva [cfr. articolo 23, paragrafo 2, lettera a)].

Nell'allegato I è talvolta utilizzata la denominazione generale del tipo: « composti di ... » o « sali di ... ». In tal caso, il fabbricante o qualsiasi altra persona che immette tale sostanza sul mercato è tenuto a precisare sull'etichetta il nome chimico esatto.

Esempio: per  $\text{BeCl}_2$ : cloruro di berillio

*Nota B*

Talune sostanze (acidi, basi, ecc.) vengono immesse in commercio in soluzione acquosa a diverse concentrazioni e richiedono pertanto un'etichettatura diversa poiché i rischi variano in funzione delle concentrazioni.

Per le sostanze dell'allegato I accompagnate dalla nota B viene utilizzata una denominazione generale del tipo: « acido nitrico... % ».

In questo caso, il fabbricante o qualsiasi altra persona che introduce tale sostanza sul mercato deve indicare sull'etichetta la concentrazione della soluzione in percentuale.

Esempio: acido nitrico 45 %

La percentuale di concentrazione viene sempre intesa peso/peso, salvo altra espressa specificazione.

È ammessa l'utilizzazione di dati supplementari (ad esempio, peso specifico, gradi Baumé) o di frasi descrittive (ad esempio fumante o glaciale).

*Nota C*

Alcune sostanze organiche possono essere commercializzate sia come isomeri ben definiti, sia sotto forma di miscela di più isomeri.

Pertanto nell'allegato I viene talvolta utilizzata una denominazione generale del tipo: « xile noto ».

In questo caso, il fabbricante o qualsiasi altra persona che immette tale sostanza sul mercato deve specificare sull'etichetta se si tratta di un isomero ben definito a) o di una miscela di isomeri b).

Esempio: a) 2,4 dimetilfenolo

b) xilenolo (miscela di isomeri)

*Nota D*

Talune sostanze che sono suscettibili di polimerizzarsi o di decomporsi spontaneamente si riscontrano generalmente sul mercato sotto forma stabilizzata. È sotto questa forma che esse sono elencate nell'allegato I della presente direttiva.

Tuttavia, tali sostanze sono a volte immesse sul mercato sotto forma non stabilizzata. In questo caso, il fabbricante o qualsiasi altra persona che immette tali sostanze sul mercato deve specificare sull'etichetta il nome della sostanza seguito dalla dicitura « non stabilizzata ».

Esempio: acido metacrilico (non stabilizzato)

*Nota E*

Alle sostanze aventi effetti specifici sulla salute delle persone (cfr. capitolo 4 dell'allegato VI), classificate come cancerogene, mutagene e/o tossiche per il ciclo riproduttivo, appartenenti alle categorie 1 o 2, viene attribuita la nota E se esse sono classificate anche come altamente tossiche (T+), tossiche (T), o nocive (Xn). Per dette sostanze, le frasi di rischio R 20, R 21, R 22, R 23, R 24, R 25, R 26, R 27, R 28, R 39, R 40 ed R 48 e tutte le combinazioni di queste frasi di rischio devono essere precedute dalla parola « anche ».

«**altamente tossico**» (inoltre anche tossico per inalazione).»

R 46-27.2 «**può causare danni genetici ereditari.**»

«**altamente tossico a contatto con la pelle e per ingestione.**»

«**Nota**»

«Questa sostanza può contenere stabilizzanti. Se lo stabilizzante modifica le caratteristiche di pericolosità della sostanza, quali specificate dall'etichetta prevista conformemente all'allegato I, la sostanza deve essere predisposta secondo le regole per l'etichettatura dei preparati perico-

«Questa sostanza può essere immessa sul mercato in una forma capace di esplodere, nel qual caso dovrà essere valutata secondo metodi di saggio appropriati e dovrà essere provvista di etichetta di pericolo indicante le sue caratteristiche esplosive».

«La classificazione e l'etichetta indicate per questa sostanza concernono soltanto la/le proprietà di pericolo indicate dalla/e frase/i di rischio in combinazione con la/le categoria/e di pericolo. I requisiti dell'articolo 6 della presente direttiva relativi ai fabbricanti, ai distributori e ai trasportatori di questa sostanza si applicano a tutti gli altri aspetti di classificazione ed etichettatura. L'etichetta finale deve rispettare i requisiti della sezione 7 dell'allegato VI della presente direttiva. La presente nota si applica soltanto a talune sostanze composte derivate dal petrolio, figuranti nell'allegato I.»

«La classificazione «**cancerogeno**» non è necessaria se si può dimostrare che la sostanza contiene meno dello 0,1 % peso/peso di benzene (Einecs n. 200-753-7). La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.»

«La classificazione «**cancerogeno**» non è necessaria se si può dimostrare che la sostanza contiene meno dello 0,1 % peso/peso di 1,3-butadiene (Einecs n. 203-450-8). Se la sostanza è classificata come cancerogena, usare almeno le frasi S (2)9-16. La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.»

«La classificazione «**cancerogeno**» non è necessaria se si può dimostrare che la sostanza contiene meno dello 0 % di estratto Dmsc secondo la misurazione IP 346. La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.»

«**Nota M**»

«La classificazione «**cancerogeno**» non è necessaria se si può dimostrare che la sostanza contiene meno dello 0,005 % peso/peso di benzo[a]pirene (Einecs n. 200-028-5). La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.»

«**N**»

«La classificazione «**cancerogeno**» non è necessaria se si conosce l'intero iter di raffinazione e si può dimostrare che la sostanza da cui il prodotto è derivato non è cancerogena. La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.»

**Nota P**

La classificazione <cancerogeno> non è necessaria se si può dimostrare che la sostanza contiene meno dello 0,1% peso/peso di benzene (Einecs n. 200-753-7). Se la sostanza è classificata come cancerogena, occorre anche la nota E.

Se la sostanza non è classificata come cancerogena, usare almeno le frasi S (2-)23-24-62. La presente nota si applica soltanto a talune sostanze composte derivate dal carbone e dal petrolio, figuranti nell'allegato I.

**Spiegazione delle note concernenti l'etichettatura dei preparati**

Le note che compaiono accanto ai limiti di concentrazione hanno il significato seguente:

**Nota 1**

Le concentrazioni indicate o, in loro assenza, le concentrazioni generali della direttiva 88/379/CEE sono espresse in percentuale del peso dell'elemento metallico calcolato con riferimento al peso totale del preparato.

**Nota 2**

La concentrazione dell'isocianato indicata rappresenta la percentuale in peso del monomero libero calcolato con riferimento al peso totale del preparato.

**Nota 3**

La concentrazione indicata è espressa in percentuale del peso degli ioni cromo disciolti in acqua, calcolato con riferimento al peso totale del preparato.

**Nota 4**

I preparati contenenti queste sostanze devono essere classificati come nocivi e caratterizzati dalla frase R 65 se rispondono ai criteri di cui al punto 3.2.3 dell'allegato VI.

**Nota 5**

I limiti di concentrazione per i preparati gassosi sono espressi in percentuale volume per volume.

## TABELLA A

Elenco degli elementi chimici ordinati secondo il loro numero atomico (Z)

Z	Simbolo			Z	Simbolo		Z	Simbolo	
1	H	Idrogeno		37	Rb	Rubidio	73	Ta	Tantalio
2	He	Elio		38	Sr	Stronzio	74	W	Tungsteno
3	Li	Litio		39	Y	Ittrio	75	Re	Renio
4	Be	Berillio		40	Zr	Zirconio	76	Os	Osmio
5	B	Boro		41	Nb	Niobio	77	Ir	Iridio
6	C	Carbonio		42	Mo	Molibdeno	78	Pt	Platino
7	N	Azoto		43	Tc	Tecnizio	79	Au	Oro
8	O	Ossigeno		44	Ru	Rutenio	80	Hg	Mercurio
9	F	Fluoro		45	h	Rodio	81	Tl	Tallio
10	Ne	Neon		46	Pd	Palladio	82	Pb	Piombo
11	Na	Sodio		47	Ag	Argento	83	Bi	Bismuto
12	Mg	Magnesio		48	Cd	Cadmio	84	Po	Polonio
13	Al	Alluminio		49	In	Indio	85	At	Astatio
14	Si	Silicio		50	Sn	Stagno	86	Rn	Radon
15	P	Fosforo		51	Sb	Antimonio	87	Fr	Francio
16	S	Zolfo		52	Te	Tellurio	88	Ra	Radio
17	Cl	Cloro		53	I	Iodio	89	Ac	Attinio
18	A	Argon		54	Xe	Xeno	90	Th	Torio
19	K	Potassio		55	Cs	Cesio	91	Pa	Protattinio
20	Ca	Calcio		56	Ba	Bario	92	U	Uranio
21	Sc	Scandio		57	La	Lantanio	93	Np	Nettunio
22	Ti	Titanio		58	Ce	Cerio	94	Pu	Plutonio

## TABELLA B

**Classificazione speciale per le sostanze organiche**

---

601	Idrocarburi
602	Derivati alogenati degli Idrocarburi
603	Alcoli e derivati
604	Fenoli e derivati
605	Aldeidi e derivati
606	Chetoni e derivati
607	Acidi organici e derivati
608	Nitrili
609	Nitroderivati
610	Cloronitro derivati
611	Azossi- e azoderivati
612	Aminoderivati
613	Basi eterocicliche e derivati
614	Glucosidi e alcaloidi
615	Cianati e isocianati
616	Ammidi e derivati
617	Perossidi organici
647	Enzimi
648	Sostanze complesse derivate dal carbone
649	Sostanze complesse derivate dal petrolio
650	Sostanze diverse

- DA : træreolier, brunkuls- ; Letolie  
[Destillatet fra brunkulstjære, med kogesinterval omtrent fra 80 °C til 250 °C. Sammensat primært af aliphatiske og aromatiske carbonhydrider og monobasiske phenoler.]
- DE : Teeröle, Braunkohle ; Leichtöl  
[Destillat aus Braunkohlenteer, siedet im Bereich von etwa 80 °C bis 250 °C. Besteht in erster Linie aus aliphatischen und aromatischen Kohlenwasserstoffen und monobasischen Phenolen.]
- EL : ελαία πίσσας, λιγνίτη· Ελαφρά έλαια  
[Το απόσταγμα από πίσσα λιγνίτη που βράζει στην περιοχή από 80 °C ως 250 °C περίπου. Αποτελείται πρωτίστως από αλειφατικούς και αρωματικούς υδρογονάνθρακες και μονοβασικές φαινόλες.]
- EN : Tar oils, brown-coal ; Light Oil  
[The distillate from lignite tar boiling in the range of approximately 80 °C to 250 °C (176 °F to 482 °F). Composed primarily of aliphatic and aromatic hydrocarbons and monobasic phenols.]
- FR : huiles de goudron, lignite ; Huile légère  
[Distillat du goudron de lignite dont le point d'ébullition est approximativement compris entre 80 °C et 250 °C. Se compose principalement d'hydrocarbures aliphatiques et aromatiques et de phénols monobasiques.]
- IT : oli di catrame, carbone bruno ; Olio leggero  
[Il distillato da catrame di lignite con un intervallo di ebollizione 80 °C - 250 °C ca. Costituito principalmente da idrocarburi alifatici ed aromatici e fenoli monobasici.]
- NL : teeroliën, bruinkool ; Lichte teerolie  
[Het destillaat van bruinkoolteer, met een kooktraject van ongeveer 80 °C tot 250 °C. Bestaat voornamelijk uit alifatische en aromatische koolwaterstoffen en monobasische fenolen.]
- PT : oleos de alcatrão, lenhite ; óleos leves  
[O destilado de alcatrão de lenhite que destila no intervalo de aproximadamente 80 °C a 250 °C. É constituído principalmente por hidrocarbonetos alifáticos e aromáticos e fenóis monobásicos.]

NOTA H

NOTA J

- ES : nafta disolvente (hulla) ; Extracto-residuo de aceite ligero, alto punto de ebullición  
[Destilado de alquitrán de hulla a elevada temperatura, aceite ligero del horno de coque o residuo del extracto alcalino del aceite de alquitrán de hulla con un intervalo de destilación aproximado de 130 °C a 210 °C. Compuesto principalmente de indeno y otros sistemas con anillos policíclicos, con un solo anillo aromático. Puede contener compuestos fenólicos y bases nitrogenadas aromáticas.]
- DA : solventnaphtha (kul) ; Syrefn letolie, højt kogende  
[Destillat, fra enten højtemperaturstenkultjære, koksovnletolie eller alkalisk ekstraktionsrest af stenkultjæreolie, med et omtrentligt destillationsinterval fra 130 °C til 210 °C. Sammensat primært af inden og andre polycykliske ringsystemer indeholdende en enkelt aromatisk ring. Kan indeholde phenolforbindelser og aromatiske nitrogenbaser.]
- DE : Lösungsmittelnaphtha (Kohle) ; Leichtölextrakt-Rückstand, hochsiedend  
[Destillat aus entweder Hochtemperaturkohleenteer, Koksofenleichtöl oder Rückstand aus alkalischem Extrakt von Kohleenteeröl mit einem ungefähren Destillationsbereich von 130 °C bis 210 °C. Besteht in erster Linie aus Inden und anderen polycyclischen Ringsystemen, die einen einzigen aromatischen Ring enthalten. Kann phenolhaltige Verbindungen und aromatische Stickstoffbasen enthalten.]
- EL : διαλύτης νάφθα (άνθρακα) : Ελαφρών ελαίων υπολείμματα εκχύλισης, υψηλού σημείου ζέσης  
[Το απόσταγμα είτε από λιθανθρακόπισσα υψηλής θερμοκρασίας, είτε από ελαφρό έλαιο κλιβάνου παραγωγής κοκ, είτε από υπολείμμα αλκαλικού εκχυλίσματος ελαίου λιθανθρακόπισσας που έχει περιοχή απόσταξης από 130 °C ως 210 °C περίπου. Αποτελείται κυρίως από ινδένιο και άλλα πολυκυκλικά δακτυλίων που περιέχουν ένα μόνον αρωματικό δακτύλιο. Μπορεί να περιέχει φαινολικές ενώσεις και αρωματικές αζωτούχες βάσεις.]
- EN : Solvent naphtha (coal) ; Light Oil Extract Residues, high boiling  
[The distillate from either high temperature coal tar, coke oven light oil, or coal tar oil alkaline extract residue having an approximate distillation range of 130 °C to 210 °C (266 °F to 410 °F) Composed primarily of indene and other polycyclic ring systems containing a single aromatic ring. May contain phenolic compounds and aromatic nitrogen bases.]
- FR : solvant naptha (charbon) ; Résidus d'extraction d'huile légère, haut point d'ébullition  
[Distillat obtenu à partir de goudron de houille à haute température, d'huile légère de four à coke ou du résidu de l'extraction alcaline d'huile de goudron de houille, et dont l'intervalle d'ébullition s'étage approximativement de 130 °C à 210 °C. Se compose principalement d'indène et d'autres systèmes polycycliques contenant un cycle aromatique. Peut contenir des composés phénoliques et des bases aromatiques azotées.]
- IT : nafta solvente (carbone) ; Olio leggero lavato, altobollente  
[Distillato di catrame di carbone ad alta temperatura, di olio leggero da forno a coke, o di residuo dell'estrazione alcalina di olio leggero di catrame con punto di ebollizione nell'intervallo 130-210 °C ca. E' costituito principalmente da indene ed altri composti policiclici contenenti un singolo anello aromatico. Può contenere composti fenolici e basi azotate aromatiche.]
- NL : soventnafta (kool) ; Lichte teerolie, extractie-residu, hoogkokende fractie  
[Het destillaat dat wordt verkregen uit het alkalische extractresidu van koolteer verkregen bij hoge temperatuur, lichte olie verkregen uit de cokesoven of koolteerolie, met een destillatietraject van 130 °C tot 210 °C. Voornamelijk samengesteld uit indeen en andere polycyclische ringsystemen die een enkele aromatische ring bevatten. Kan fenolische verbindingen en aromatische stikstofbasen bevatten.]
- PT : nafta (carvão) ; Extracto de resíduo de óleo leve, alta ebulição  
[O destilado quer do alcatrão de carvão de temperatura elevada, óleo leve do forno de coque, ou resíduo de extracção alcalina do óleo de alcatrão de carvão com um intervalo de destilação de aproximadamente 130 °C a 210 °C. Compõe-se principalmente de indeno e outros sistemas anulares policíclicos contendo um so anel aromático. Pode conter compostos fenólicos e bases azotadas aromáticas.]

- ES : destilados (alquitrán de hulla), aceites ligeros, fracción neutra ; Extracto residuo de aceite ligero, alto punto de ebullición  
[Destilado de la destilación fraccionada de alquitrán de hulla a elevada temperatura. Compuesto principalmente de hidrocarburos aromaticos de un anillo alquil-sustituido con un intervalo de ebullición aproximado de 135 °C a 210 °C. Puede incluir también hidrocarburos insaturados como indeno y cumarona.]
- DA : destillater (stenkultsjære), letolier, neutral fraktion ; Syrefri letolie, højt kogende  
[Et destillat fra den fraktionerede destillation af højtemperaturstenkultsjære. Sammensat primært af alkylsubstituerede, monocycliske, aromatisk carbonhydrider, med koginterval omtrent fra 135 °C til 210 °C. Kan også indeholde umættede carbonhydrider såsom inden og coumaron.]
- DE : Destillate (Kohlenteer), Leichtöle, neutrale Fraktion ; Leichtölextrakt-Rückstand, hochsiedend  
[Destillat aus der fraktionierten Destillation von Hochtemperatur-Kohlenteer. Besteht in erster Linie aus alkylsubstituierten aromatischen Kohlenwasserstoffen mit einem Ring und siedet im Bereich von etwa 135 °C bis 210 °C. Kann auch ungesättigte Kohlenwasserstoffe wie Inden und Coumaron enthalten.]
- EL : αποσταγμάτα (λιθανθρακόπισσας), ελαφρών ελαίων, ουδέτερο κλάσμα· Ελαφρών ελαίων υπολείμματα εκχύλισης, υψηλού σημείου ζέσης  
[Αποστάγμα κλασματικής απόσταξης λιθανθρακόπισσας υψηλής θερμοκρασίας. Αποτελείται κυρίως από αλκυλοσποκατάστατα αρωματικών υδρογονανθράκων με ένα δακτύλιο, με περιοχή βρασμού από 135 °C ως 210 °C περίπου. Μπορεί επίσης να περιλαμβάνουν ακόρεστους υδρογονάνθρακες όπως ινδένιο και κουμαρόνη.]
- EN : Distillates (coal tar), light oils, neutral fraction ; Light Oil Extract Residues, high boiling  
[A distillate from the fractional distillation of high temperature coal tar. Composed primarily of alkyl-substituted one ring aromatic hydrocarbons boiling in the range of approximately 135 °C to 210 °C (275 °F to 410 °F). May also include unsaturated hydrocarbons such as indene and coumarone.]
- FR : distillats (goudron de houille), huiles légères, fraction neutre : Résidus d'extraction d'huile légère, haut point d'ébullition  
[Distillat obtenu par distillation fractionnée de goudron de houille à haute température. Se compose principalement d'hydrocarbures aromatiques monocycliques alkyl-substitués dont le point d'ébullition est compris approximativement entre 135 °C et 210 °C. Est également constitué d'hydrocarbures insaturés tels que l'indène et la coumarone.]
- IT : distillati (catrame di carbone), olii leggeri, frazione neutra ; Olio leggero lavato, altobollente  
[Distillato della distillazione frazionata di catrame di carbone ad alta temperatura. E' costituito prevalentemente da idrocarburi aromatici moniciclici alchil-sostituiti con punto di ebollizione nell'intervallo 135 °C - 210 °C ca. Può anche contenere idrocarburi insaturi come indene e cumarone.]
- NL : destillaten (koolteer), lichte oliën, neutrale fractie ; Lichte teerolie, extractie-residu, hoogkokende fractie  
[Een destillaat dat afkomstig is uit de gefractioneerde destillatie van bij hoge temperatuur verkregen koolteer. Voornamelijk samengesteld uit alkylgesubstitueerde aromatische koolwaterstoffen met één ring, met een kooktraject van ongeveer 135 °C tot 210 °C. Kan bovendien onverzadigde koolwaterstoffen, zoals indeen en coumaroon, bevatten.]
- PT : destilados (alcatrão de carvão), óleos leves, fracção neutra ; Extracto de resíduo de óleo leve, alta ebulição  
[Um destilado da destilação fraccionada de alcatrão de carvão de temperatura elevada. É constituído principalmente por hidrocarbonetos aromaticos mononucleares com substituintes alquilo e destila no intervalo de aproximadamente 135 °C a 210 °C. Também pode incluir hidrocarbonetos insaturados tais como indeno e cumarona.]

NOTA 1

NOTA 2

- ES : destilados (petróleo), aceite de pirólisis de la fabricación de alqueno-alquino, mezclado con alquitrán de hulla a elevada temperatura, fracción de indeno ; Redestilados  
[Combinación compleja de hidrocarburos obtenida como un redestilado de la destilación fraccionada de alquitrán de hulla bituminosa a elevada temperatura y aceites residuales que se obtienen por producción pirólítica de alquenos y alquinos de los productos del petróleo o gas natural. Compuesta en su mayor parte de indeno y con un intervalo de ebullición aproximado de 160 °C a 190 °C.]
- DA : destillater (råolie), alken-alkyn-fabrikations-pyrolyseolie, blandet med højtemperatursstenkultsjære, indenfraktion ; Redestillater  
[En sammensat blanding af carbonhydrider opnået som et redestillat fra den fraktionerede destillation af højtemperatursjære fra bituminøse kul, og restolier, der er opnået fra den pyrolytiske fremstilling af alkenier og alkyner ud fra råolieprodukter eller naturgas. Den består overvejende af inden, og har koginterval omtrent fra 160 °C til 190 °C.]
- DE : Destillate (Erdöl), Alken-Alkinherstellung Pyrolyseöl, gemischt mit Hochtemperatur-Kohlenteer, Inden-Fraktion ; Redestillate  
[Komplexe Kombination von Kohlenwasserstoffen, die man aus der Redestillation der fraktionierten Destillation von Steinkohlen-Hochtemperatur-Teer und Rückstandsölen, die aus der pyrolytischen Herstellung von Alkenen und Alkinen aus Erdölprodukten oder Erdgas stammen, erhält. Besteht vorherrschend aus Inden und siedet im Bereich von ungefähr 160 °C bis 190 °C.]
- EL : αποσταγμάτων (πετρελαίου), ελαίου πυρόλυσης παρασκευής αλκενίου-αλκυνίου, μείγματος με υψηλής θερμοκρασίας λιθάνθρακόπισσα, κλάσμα ινδενίου· Επαναπόσταγμα  
[Πολύπλοκος συνδυασμός υδρογονανθράκων που λαμβάνεται ως επαναπόσταγμα από την κλασματικής απόσταξη υψηλής θερμοκρασίας πίσσας λιθάνθρακα και υπολειμματικών ελαίων τα οποία λαμβάνονται με την πυρολυτική παραγωγή αλκενίων και αλκυνίων από προϊόντα πετρελαίου ή φυσικό αέριο. Συνίσταται κυρίως από ινδένιο και βράζει στην περιοχή από 160 °C ως 190 °C περίπου.]
- EN : Distillates (petroleum), alkene-alkyne manuf. pyrolysis oil, mixed with high-temp. coal tar, indene fraction ; Redistillates  
[A complex combination of hydrocarbons obtained as a redistillate from the fractional distillation of bituminous coal high temperature tar and residual oils that are obtained by the pyrolytic production of alkenes and alkynes from petroleum products or natural gas. It consists predominantly of indene and boils in a range of approximately 160 °C to 190 °C (320 °F to 374 °F).]
- FR : distillats (pétrole), huile de pyrolyse de fabrication d'alcènes et d'alcynes, mélangée à du goudron de houille à haute température, fraction indène ; Fractions secondaires  
[Combinaison complexe d'hydrocarbures obtenue comme redistillat dans la distillation fractionnée de goudron à haute température de charbon bitumineux et d'huiles résiduelles issues de la production par pyrolyse d'alcènes et d'alcynes à partir de produits pétroliers ou de gaz naturel. Se compose principalement d'indène ; son point d'ébullition est compris approximativement entre 160 °C et 190 °C.]
- IT : distillati (petrolio) olio di pirólisi della produzione di alchene-alchino, miscelato con catrame di carbone ad alta temperatura, frazione indene ; Ridistillati  
[Combinazione complessa di idrocarburi ottenuta quale ridistillato dalla distillazione frazionata di catrame ad alta temperatura da carbone bituminoso ed olii residui ottenuti dalla produzione pirolitica di alcheni ed alchini da prodotti petroliferi o gas naturale. È costituita prevalentemente da indene ed ha un punto di ebollizione nell'intervallo 160 °C-190 °C ca.]
- NL : Destillaten (aardolie), alkeen-alkynvervaardigings-pyrolyse-olie, gemengd met hoge temperatuur koolteer, indeenfractie ; Geherdestilleerde fracties  
[Een complexe verzameling koolwaterstoffen die wordt verkregen als een herdestillaat uit de fractionele destillatie van hoge temperatuur teer uit bitumineuze kool en residuoliën die zijn verkregen bij de pyrolytische productie van alkenen en alkyenen uit aardolieprodukten of aardgas. Bestaat voornamelijk uit indeen en heeft een kooktraject van ongeveer 160 °C tot 190 °C.]
- PT : destilados (petróleo), óleo de pirólise da produção de alcenos-alcinos, misturado com alcatrão de carvão de temperatura elevada, fracção de indeno ; Redestilados  
[Uma combinação complexa de hidrocarbonetos obtida como o redestilado da destilação fraccionada de alcatrão de carvão betuminoso de temperatura elevada e de óleos residuais que são obtidos pela produção de alcenos e alcinos por pirólise de produtos petrolíferos ou gás natural. É constituída predominantemente por indeno e destila no intervalo de aproximadamente 160 °C a 190 °C.]

NOTA H

NOTA J

- ES : destilados (hulla), aceites residuales de la pirólisis de alquitrán de hulla, aceites de naftaleno ; Redestilados  
[Redestilado obtenido de la destilación fraccionada de alquitrán de hulla bituminosa a elevada temperatura y aceites residuales de pirólisis y con un intervalo de ebullición aproximado de 190 °C a 270 °C. Compuesto principalmente de aromáticos dinucleares sustituidos.]
- DA : destillater (kul), stenkulstjære-restpyrolyseolier, naphthalenolier ; Redestillater  
[Redestillater, opnået fra den fraktionerede destillation af højtemperaturstjære fra bituminøse kul og pyrolyserestolier, med koginterval omtrent fra 190° C til 270° C. Sammensat primært af substituerede, bicycliske aromater.]
- DE : Destillate (Kohle), Kohlenteerrückstand Pyrolyseöle, Naphthalinöle ; Redestillate  
[Das Redestillat, das man aus fraktionierter Destillation von Steinkohlen-Hochtemperatur-Teer und Pyrolyse-Rückstandsölen erhält. Siedet im Bereich von etwa 190° C bis 270° C. Besteht in erster Linie aus substituierten dinuklearen Aromaten.]
- EL : αποσταγματα (πετρελαίου), υπολειμματικών ελαίων πυρόλυσης λιθανθρακόπισσας, έλαια ναφθαλίνης;  
Επαναπόσταγμα  
[Το επαναπόσταγμα που λαμβάνεται από την κλασματική απόσταξη υψηλής θερμοκρασίας πίσσας διτουμενικού άνθρακα και υπολειμματικών ελαίων πυρόλυσης που δράζει στην περιοχή από 190 °C ως 270 °C περίπου. Αποτελείται πρωτίστως από υποκα-  
τεστημένα διπύρρηνα αρωματικά.]
- EN : Distillates (coal), coal tar-residual pyrolysis oils, naphthalene oils ; Redistillates  
[The redistillate obtained from the fractional distillation of bituminous coal high temperature tar and pyrolysis residual oils and boiling in the range of approximately 190 °C to 270 °C (374 °F to 518 °F). Composed primarily of substituted dinuclear aromatics.]
- FR : distillats (charbon), goudron de houille, huiles résiduelles de pyrolyse, huiles de naphthalène ; Fractions secondaires  
[Redistillat obtenu par distillation fractionnée du mélange de goudron de charbon bitumineux à haute température et d'huiles résiduelles de pyrolyse, et dont le point d'ébullition est approximativement compris entre 190 °C et 270 °C. Se compose principa-  
lement d'hydrocarbures aromatiques bicycliques substitués.]
- IT : distillati (carbone), olii residui di pirolisi di catrame di carbone, olii naftalenici ; Ridistillati  
[Ridistillato ottenuto dalla distillazione frazionata di catrame ad alta temperatura di carbone bituminoso ed olii residui di pirolisi, con punto di ebollizione nell'intervallo 190 °C-270 °C ca. Costituito prevalentemente da aromatici diciclici sostituiti.]
- NL : destillaten (kool), residuele pyrolyse-oliën uit koolteer, naftaleenoliën ; Geherdestilleerde fracties  
[Het herdestillaat dat wordt verkregen uit de gefractioneerde destillatie van bij hoge temperatuur uit bitumineuze kool verkregen teer en residuele pyrolyse-oliën, met een kooktraject van ongeveer 190 °C tot 270 °C. Voornamelijk samengesteld uit gesubstitueerde dinucleaire aromaten.]
- PT : destilados (carvão), óleos residuais de pirólise-alcatrão de carvão, óleos de naftaleno ; Redestilados  
[O redestilado obtido da destilação fraccionada de alcatrão de carvão betuminoso de temperatura elevada e óleos residuais de pirólise e que destila no intervalo de aproximadamente 190 °C a 270 °C. É constituído principalmente por aromáticos dinucleares substituídos.]

NOTA H

NOTA J

- ES aceites del extracto (hulla), aceites residuales de pirólisis del alquitrán de hulla, aceite de naftaleno, redestilado ; Redestilados  
[Redestilado de la destilación fraccionada del aceite de metilnaftaleno degradado y desfenolado obtenido de un alquitrán de hulla bituminosa a elevada temperatura y aceites residuales de pirólisis con un intervalo de ebullición de 220 °C a 230 °C. Compuesto en su mayor parte de hidrocarburos aromáticos dinucleares sustituidos y no sustituidos.]
- DA ekstraktionsrester (kul), stenkulstjære og restpyrolyseolier, naphthalenolie, restdestillater ; Redestillater  
[Redestillatet fra den fraktionerede destillation af alphenoleret og afbaset methylnaphthalenolie opnået fra højtemperaturstjære fra bituminøse kul og restpyrolyseolier, med koginterval omtrent fra 220 °C til 230 °C. Det består overvejende af usubstituerede og substituerede, bicycliske, aromatiske carbonhydrider.]
- DE Extraktöle (Kohle), Kohlenteerrückstand Pyrolyseöle, Naphthalinöl, Redestillat ; Redestillate  
[Redestillat aus der fraktionierten Destillation von dephcnolierem und von der Basis befreitem Methylnaphthalinöl, erhalten aus Steinkohlen-Hochtemperatur-Teer und Pyrolyserückstandsölen, siedet im ungefähren Bereich von 220 °C bis 230 °C. Besteht vorherrschend aus unsubstituierten und substituierten dinuklearen aromatischen Kohlenwasserstoffen.]
- EL ελαία εκχύλισης (άνθρακα), ελαίων πυρόλυσης υπολειμμάτων λιθανθρακόπισσας, ελαίου ψαφθαλίνης, επαναπόσταγμα: Επαναπόσταγμα  
[Το επαναπόσταγμα από την κλασματική απόσταξη ελαίου μεθυλοναφθαλίνης από το οποίο έχουν απομακρυνθεί οι φαινόλες και οι βάσεις, που λαμβάνεται από υψηλής θερμοκρασίας πίσσα διτομμενικού άνθρακα και υπολειμματικά έλαια πυρόλυσης, που βράζει στην περιοχή από 220 °C ως 230 °C περίπου. Συνίσταται κυρίως από μη υποκαταστημένους και υποκαταστημένους διπύρηνους αρωματικούς υδρογονάνθρακες.]
- EN Extract oils (coal), coal tar-residual pyrolysis oils, naphthalene oil, redistillate ; Redistillates  
[The redistillate from the fractional distillation of dephenolized and debased methylnaphthalene oil obtained from bituminous coal high temperature tar and pyrolysis residual oils boiling in the approximate range of 220 °C to 230 °C (428 °F to 446 °F). It consists predominantly of unsubstituted and substituted dinuclear aromatic hydrocarbons.]
- FR huiles d'extraction (charbon), goudron de houille, huiles résiduelles de pyrolyse, huile de naphthalène, redistillat ; Fractions secondaires  
[Redistillat issu de la distillation fractionnée d'un mélange d'huiles résiduelles de pyrolyse et d'huile de naphthalène, débarrassée des bases et de phénols, issue du goudron à haute température de charbon bitumineux, et dont le point d'ébullition est approximativement compris entre 220 °C et 230 °C. Se compose principalement d'hydrocarbures aromatiques bicycliques substitués et non substitués.]
- IT Olii estratti (carbone) olii residui di pirolisi di catrame di carbone, olio naftalenico, ridistillato ; Ridistillati  
[Ridistillato dalla distillazione frazionata di olio metilnaftalenico defenolato e liberato dalle basi ottenuto da catrame ad alta temperatura da carbone bituminoso e da olii residui di pirolisi con punto di ebollizione nell'intervallo 220 °C-230 °C ca. È costituito prevalentemente da idrocarburi aromatici diciclici sostituiti e non sostituiti.]
- NL extract-oliën (kool), residuele pyrolyse-oliën uit koolteer, naftaleenolie, herdestillaat ; Geherdestilleerde fracties  
[Het herdestillaat dat afkomstig is uit de gefractioneerde destillatie van, van basen en fenolen ontdane, methylnaftaleenolie die wordt verkregen uit bij hoge temperatuur uit bitumineuze kool verkregen teer en residuele pyrolyse-oliën en dat een kooktraject heeft van ongeveer 220 °C tot 230 °C. Bestaat voornamelijk uit ongesubstitueerde en gesubstitueerde dinucleaire aromatische koolwaterstoffen.]
- PT resíduos de extracção (carvão), óleos residuais de alcatrão de carvão, óleo de naftaleno, redestilado ; Redestilados  
[O redestilado da destilação fraccionada de óleo de metilnaftaleno sem fenóis e sem bases obtido de alcatrão de carvão betuminoso de temperatura elevada e óleos residuais de pirólise e que destila no intervalo de aproximadamente 220 °C a 230 °C. É constituído predominantemente por hidrocarbonetos aromáticos dinucleares substituídos e não substituídos.]
